BMW Mini coming soon. Check for latest additions.

Description

The AutoTEC is an advanced hand held scan tool which plugs into the vehicle's diagnostic socket much like a conventional scan tool. All software is contained on a single CompactFlash™ card which can remain neatly plugged into the unit. Also all pods and adaptors have been eliminated – making the tool even easier to use.

Coding a key is just a matter of following simple step-by-step screen guides, i.e. switch ignition on, switch ignition off sequences. A lot of vehicles can be done without contacting the main dealer and even recovering from the side of the road.

Years of continuous development have produced the AutoTEC tool. And unlike almost all other companies, we are proud to develop the tool in this country and work closely with our customers to keep current and up-to-date.

Testimonials

" We Regularly use the Kit and find the Technical Support First Class. The Software Updates are Continuous "
Derek Merson, The Metropole Garage. www.derekmerson.co.uk

" I'm Testing the Kit at the moment and can say I'm Really Impressed with it. It's so Easy to use "
Paul Gunstone, Autotalk UK user. www.paulgunstone-mechanicalservices.co.uk

" Most Pleased with the Kit. It has now been certified by the Locksmith Organisation and Recommended to our members "
Martin Pink, Rapid Locksmiths, Institute of Certified Locksmiths member. www.rapidlocksmith.com

" Very Pleased with the Equipment since I purchased it a year ago. Pin Extraction is a great help recovering cars from the side of the road. Offers something other tools can't do "
Robert Mattin, Robs Auto's.

Kit Contents
